

To Whom It May Concern:

We started working with Blade Polska s. c. in June 2012. Since then Blade Polska played a crucial role in several of our major projects. They were responsible for analyzing, designing, developing and deploying application and infrastructure changes necessary to achieve exceptional applications performance and robustness.

They doubled the throughput of our Django apps, making it possible for our clients to ship a successful MMO game and a new mobile social platform. The aforementioned apps were deployed using cloud-based infrastructure. Blade Polska's consultants possess unique knowledge enabling them to look for a possibility of performance improvement in every tier and aspect of the application.

Everything was delivered in line with expectations and in timely manner.

Apart from performance optimizations Blade Polska created a website for one of our clients, proving that they possess deep understanding of front-end technologies as well.

Their communication skills are excellent, which makes working with them very smooth and enjoyable. They are not only highly qualified and competent experts but also people who can build relationship based on honesty, mutual trust and responsibility.

We're looking forward to work with Blade Polska on another project and we highly recommend their team for any of your software endeavors.

Regards,  
Jakub Lipiński
